DESIGN THINKING · ASSIGNMENT 3

IIITA Registration Experience Ideation Stage Report

Mind mapping, group brainstorming and SCAMPER across three problem statements

Group	Group 10
Stage	Ideate
Builds on	Define Stage Report (Assignment 2): problem statements PS-1 and PS-2, five hypotheses, POVs
Course	Design Thinking, BTech V Semester, Section A (July to December 2026)
Submission window	Last week of October 2026

Team

Team member	Roll number	Sticky-note code
Sudhanshu	IIT2024081	SD
Vishwas	IIT2024087	VS
Vichanshu Raj	IIT2024083	VR
Saumya Sood	IIT2024018	SS
Satwik Santosh	IIT2024084	ST
Kyan Mahajan	IIT2024092	KM
Akshat Parmar	IIT2024077	AP
Sarthak Sharma	IIT2024043	SR

Executive Summary

In Assignment 2 we defined two problem statements from our Empathize research on IIITA registration. This stage **diverges** on those two and on the course problem statement, using three methods: individual mind mapping, a timed group brainstorm and SCAMPER. We then **converge** on one concept per problem statement for prototyping.

The three problem statements

Code	Theme	How Might We prompt
PS-T	**Course problem statement**	How might we make public transport (buses and trains) safer, more accessible and more engaging for daily commuters?
PS-1	**Certainty before travel**	How might we help first year students prove, before they leave home, that their registration is complete and accepted?
PS-2	**From gate to a ready room**	How might we guide every first year student from the campus gate to a ready hostel room with confidence at each step?

Requirement checklist

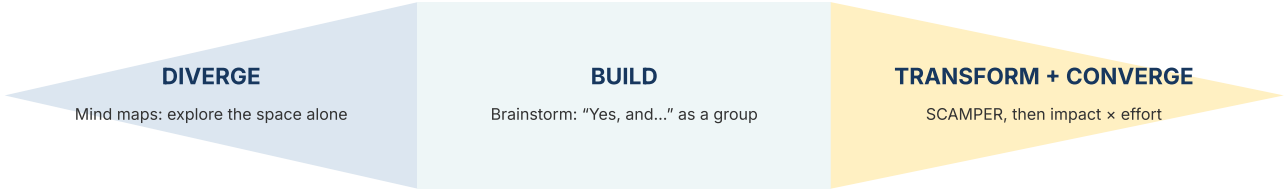

Brief requirement	PS-T	PS-1	PS-2
Mind map: central node plus 3 or more primary branches	4 branches	4 branches	4 branches
Mind map: 2 or more secondary nodes per branch	3 to 4 each (14 nodes)	3 each (12 nodes)	3 each (12 nodes)
Mind map: keywords, colour coding, icons, linked concepts	✔ 3 links	✔ 3 links	✔ 3 links
Brainstorm: 15 or more distinct ideas	18 ideas	17 ideas	17 ideas
Brainstorm: “Yes, and...” on 3 or more ideas	4 builds	3 builds	3 builds
Brainstorm: 3 labelled thematic clusters	✔	✔	✔
SCAMPER: all 7 letters on one existing feature	Stop-request button	Registration advisory PDF	Paper token queue

Report Contents

1. Ideation approach 3
2. Individual mind maps (PS-T, PS-1, PS-2) 4
3. Group brainstorming boards (PS-T, PS-1, PS-2) 7
4. SCAMPER matrices (PS-T, PS-1, PS-2) 11
5. Converging: selecting concepts for prototyping 14
6. Generative AI acknowledgement 16

1. Ideation Approach

Each method has a different job. **Mind mapping** is done individually first, so that every member explores the problem space before the group can anchor on one idea. **Brainstorming** uses the group to build quantity and to combine ideas. **SCAMPER** forces structured variation on one feature that already exists, which tends to produce ideas the open brainstorm missed.

Rules we followed

Brainstorm rules (15:00 timer)

- Defer judgement: no "but" for the first 15 minutes
- Go for quantity: target 15 or more ideas per board
- Build on others with **"Yes, and..."**, written as an attached note
- One idea per sticky, with a headline verb
- Each member has their own sticky colour, so contributions stay visible

Staying anchored to evidence

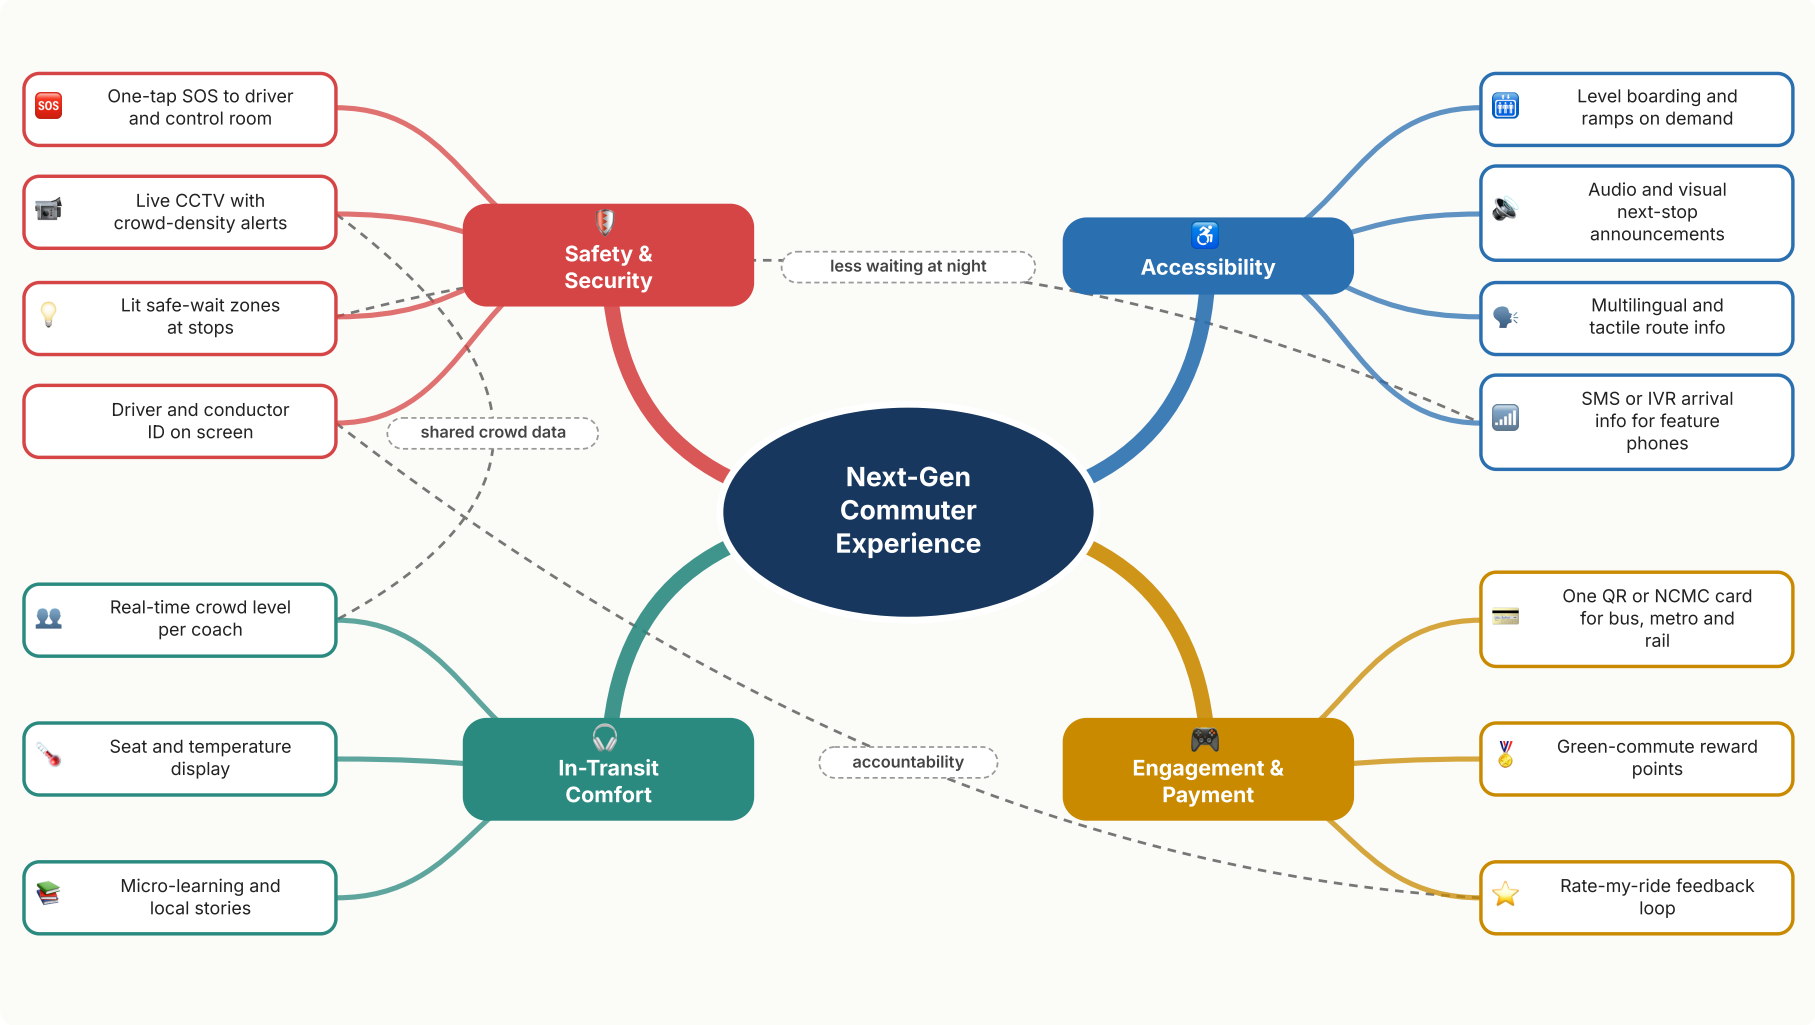

- Every board starts with the HMW from Assignment 2
- The persona POVs (Ananya, Kabir, Rohan, Meera) are pinned beside the board
- Clusters are named after user needs, not technologies
- Ideas are tagged later with the hypothesis they would test (H1 to H5)
- For PS-T, we reused the same lenses: safety, access, engagement

From Define to Ideate

Assignment 2 output	How it feeds this stage
Master POV: students need repeated proof they are on the right path	Central lens for PS-1 and PS-2 mind maps: every branch must produce proof or reassurance
HMW lenses (amplify, eliminate, opposite, assumptions, resources, analogy)	Used as prompts when the brainstorm slowed down; analogies seeded the SCAMPER "Adapt" row
Hypotheses H1 to H5	Convergence criteria: concepts that can test a hypothesis rank higher
Journey-map valleys (verification desk, room entry)	Priority targets for PS-1 and PS-2 respectively

2. Individual Mind Map · PS-T

HMW: How might we make public transport (buses and trains) safer, more accessible and more engaging for daily commuters?

Safety & Security · Accessibility · In-Transit Comfort · Engagement & Payment — - - - dashed line = linked concept

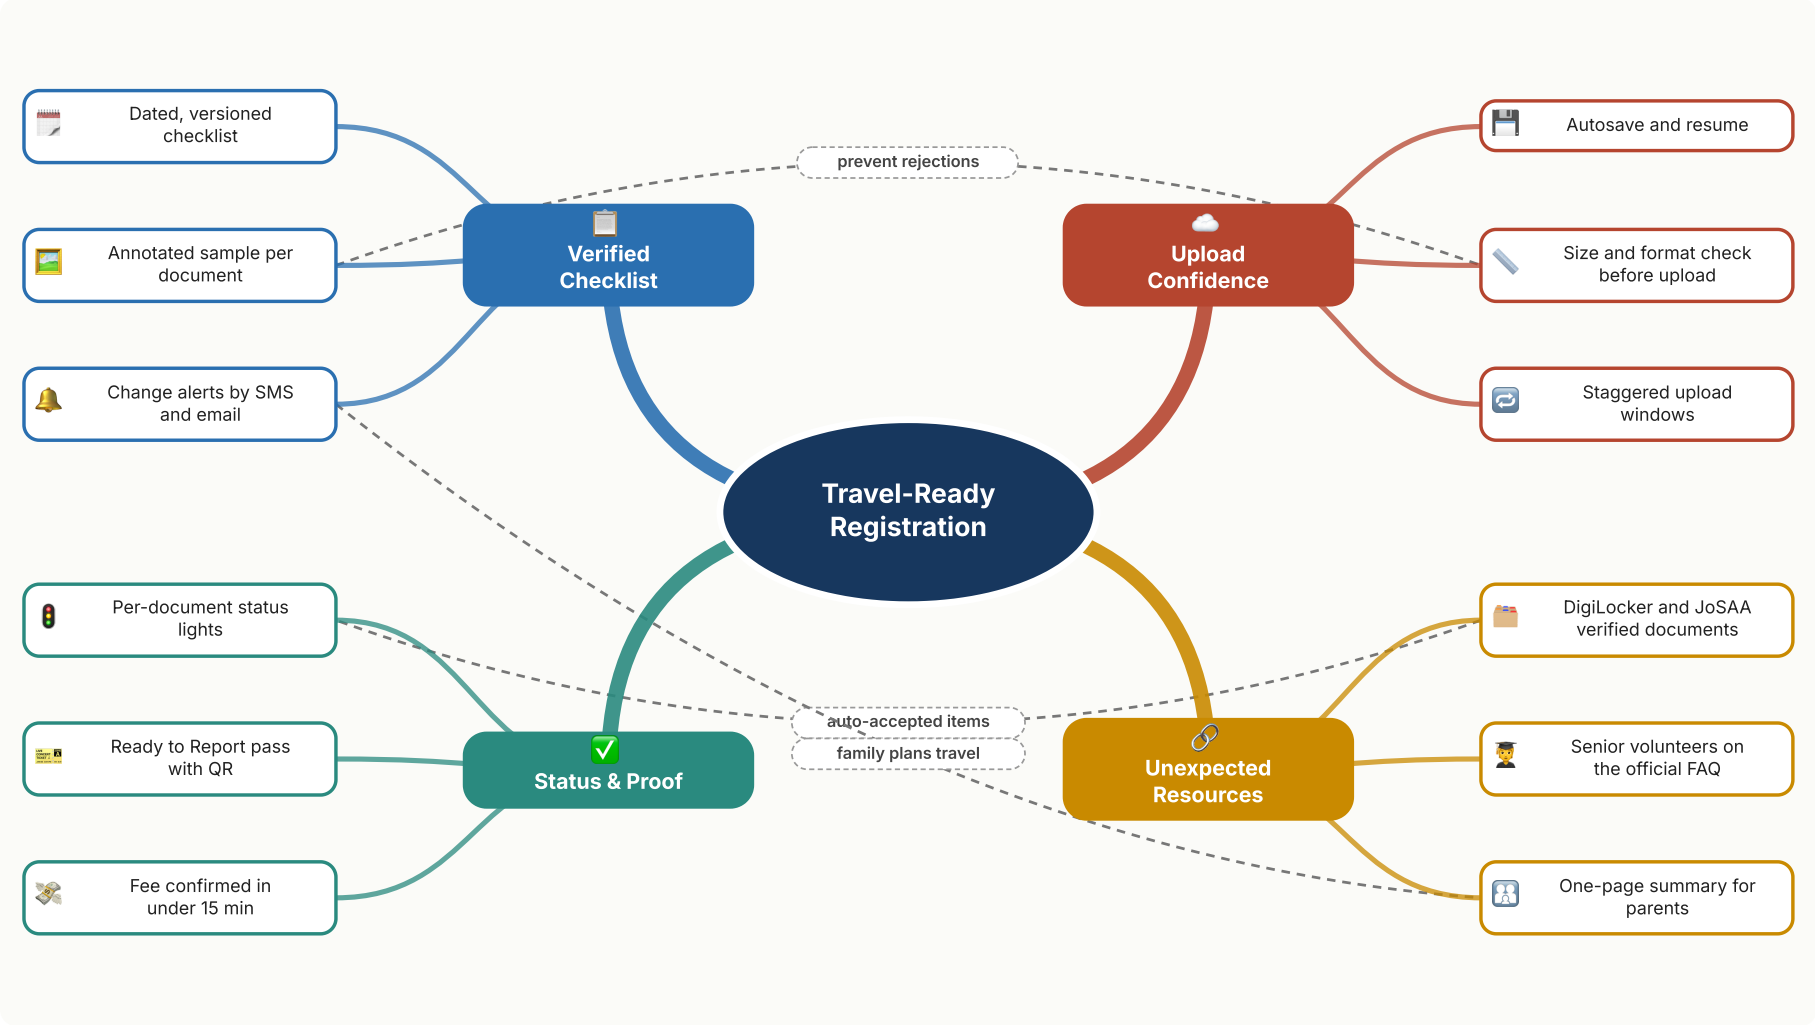

Insight 1. Safety and comfort share one data source: crowd density helps a commuter both avoid a packed bus and feel safer.

Insight 2. Accessibility ideas must also reach feature-phone users (SMS or IVR), not only app users.

Insight 3. Engagement works best when it rewards behaviour that also helps the system, such as off-peak travel or feedback.

2. Individual Mind Map · PS-1

HMW: How might we help first year students prove, before they leave home, that their registration is complete and accepted?

Verified Checklist · Upload Confidence · Status & Proof · Unexpected Resources · - - - dashed line = linked concept

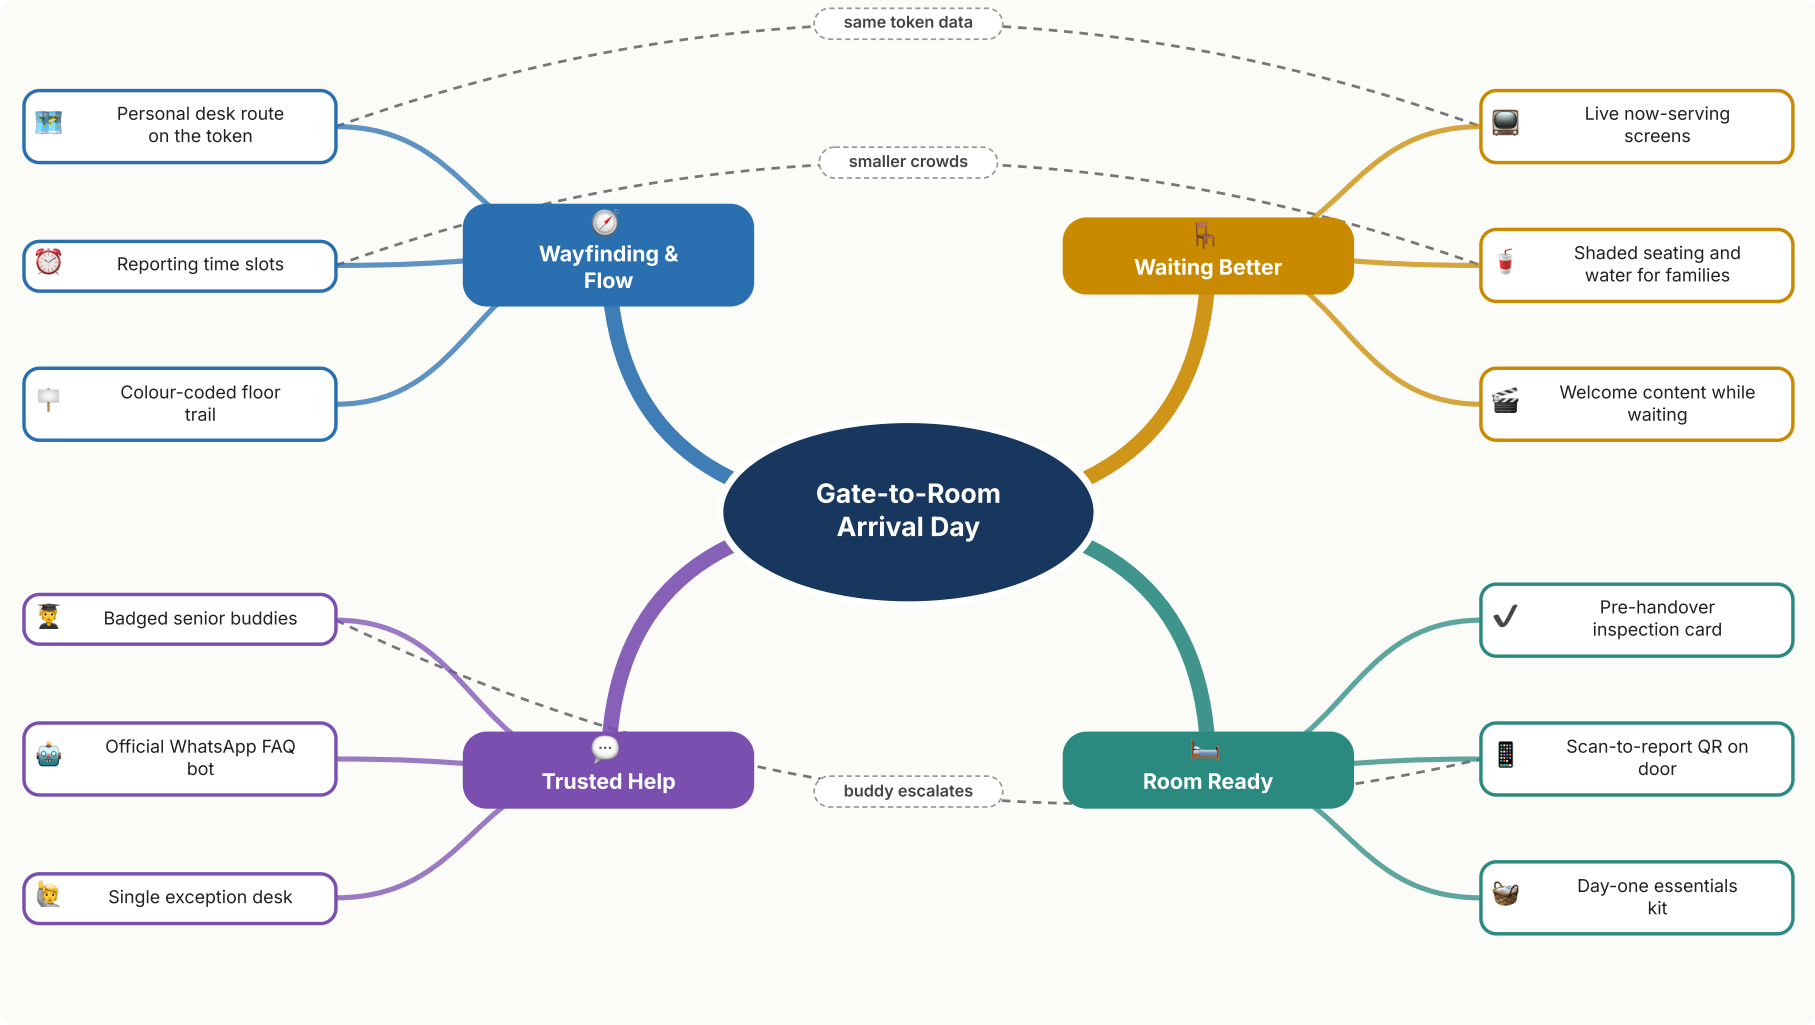

Insight 1. The checklist and the upload should be the same object: every list item becomes an upload slot with a status.

Insight 2. The institute already holds verified data (JoSAA, DigiLocker). Reusing it shrinks the checklist instead of explaining it better.

Insight 3. Parents are decision-makers for travel, so the proof has to reach them in plain language too.

2. Individual Mind Map · PS-2

HMW: How might we guide every first year student from the campus gate to a ready hostel room with confidence at each step?

Wayfinding & Flow · Waiting Better · Trusted Help · Room Ready · - - - dashed line = linked concept

Insight 1. One token can drive the route, the wait screens and the hostel handover, so data entered once serves the whole day.

Insight 2. Senior buddies are the bridge between the hall and the hostel. They are already trusted (PEER ≥16 in A1).

Insight 3. Slots reduce peak crowding, which makes every waiting-comfort idea cheaper to deliver.

Brainstorm Board · PS-T Next-Gen Commuter

⏱ 15:00 timed session

HMW: How might we make public transport (buses and trains) safer, more accessible and more engaging for daily commuters?

Feel Safe, Day & Night — 6 ideas

- #1 Panic button on every seat row that alerts the driver and the nearest police van — SD
  - **YES, AND... (VS)** it also shares live GPS and a 10-second cabin clip
- #2 Women's safe-seat zone near the driver, lit in purple — SS
- #3 Live crowd-density meter at stops, so you can skip a packed bus — KM
- #4 Night request to get off between stops after 9 pm — AP
- #5 Driver and conductor photo and ID QR shown on screen — VR
- #6 Commuter-rated safe-stop map — ST

Ride for Everyone — 6 ideas

- #7 Wheelchair users pre-book ramp and priority space via SMS — SR
  - **YES, AND... (SD)** the driver's dashboard shows which stop needs the ramp
- #8 Handrail vibrates one stop before your destination — VS
- #9 Tactile and braille route strip on poles — SS
- #10 Announcements switch between Hindi, English and the regional language by route — KM
- #11 Missed-call IVR gives bus ETA to feature-phone users — AP
- #12 Kneeling low-floor buses on hospital and market routes — VR

Make the Ride Worth It — 6 ideas

- #13 Green-commute points redeemable at metro and canteen — ST
  - **YES, AND... (SR)** double points for off-peak travel, to spread the crowd
- #14 Two-minute local-history audio stories tied to stops — SD
- #15 Quiet study coach with free Wi-Fi on trains — VS
- #16 One-tap rate-my-ride after alighting — SR
- #17 Seat-availability lights outside each coach — KM
  - **YES, AND... (VR)** the same data feeds the crowd meter at stops
- #18 Single QR or NCMC card for bus, metro and rail — AP

Sticky colour = author: SD Sudhanshu · VS Vishwas · VR Vichanshu Raj · SS Saumya Sood · ST Satwik Santosh · KM Kyan Mahajan · AP Akshat Parmar · SR Sarthak Sharma | dashed attached note = "Yes, and..." build by a teammate

Brainstorm Board · PS-1 Certainty Before Travel

⏱ 15:00 timed session

HMW: How might we help first year students prove, before they leave home, that their registration is complete and accepted?

📋 Know Exactly What to Bring — 6 ideas

- #1 Personalised checklist generated from category, state and quota — VS
  - **YES, AND... (SS)** each item expands to a photo of a correct sample
- #2 Advisory frozen 10 days before reporting, with a visible version number — AP
- #3 SMS, email and WhatsApp alert whenever any rule changes — SR
- #4 "Notary needed?" tag on every document — KM
- #5 One-page summary for parents in Hindi and English — SD
- #6 Seniors film a mock verification desk walkthrough — ST

☁️ Upload Once, Confidently — 6 ideas

- #7 Autosave every field; resume from the exact failed step — VR
  - **YES, AND... (KM)** an offline mode queues uploads until the hotspot reconnects
- #8 Pre-upload checker flags size, format or blur before submit — SS
- #9 Staggered upload windows by roll number to avoid crashes — SD
- #10 Pull documents directly from DigiLocker or JoSAA — AP
- #11 Fee status auto-updates from the bank reference within 15 min — ST
- #12 Downloadable "Ready to Report" pass with QR, like airline web check-in — SR

💬 Help That Answers Fast — 5 ideas

- #13 Official WhatsApp FAQ bot that uses only the latest advisory — KM
  - **YES, AND... (VS)** anything it cannot answer goes to a senior volunteer within 10 min
- #14 Bookable video-call document check before travel — VR
- #15 Help ticket with screenshot; one owner until resolved — SS
- #16 Seniors certified as verified helpers with an official badge — ST
- #17 Public change-log page: what changed, when and why — SD

Sticky colour = author: SD Sudhanshu · VS Vishwas · VR Vichanshu Raj · SS Saumya Sood · ST Satwik Santosh · KM Kyan Mahajan · AP Akshat Parmar · SR Sarthak Sharma | dashed attached note = "Yes, and..." build by a teammate

Brainstorm Board · PS-2 Gate to a Ready Room

⏱ 15:00 timed session

HMW: How might we guide every first year student from the campus gate to a ready hostel room with confidence at each step?

Move Without Getting Lost — 6 ideas

- #1 Token shows a personal route: Desk A, then B, then C, then Hostel — SR
  - **YES, AND... (VR)** it pings your phone when your desk is ready, so you can sit anywhere
- #2 Colour-coded floor trail from the gate to each desk — VS
- #3 Reporting slots by branch, assigned a week ahead — SD
- #4 Campus map card handed to families at the gate — KM
- #5 Express green lane for pre-verified students — AP
- #6 One exception desk at the entrance for every problem case — ST

Wait Less, Wait Better — 5 ideas

- #7 Live now-serving screens per desk — SS
  - **YES, AND... (AP)** show the average time per student so families can plan
- #8 Shaded seating, fans and water for parents — VR
- #9 Welcome film and club stalls in the waiting hall — KM
- #10 Roaming verifiers come to seated families by token — SD
- #11 Parents' lounge with an FAQ volunteer — ST

A Room Ready to Live In — 6 ideas

- #12 Pre-handover inspection card signed by the caretaker — VS
  - **YES, AND... (SR)** a photo of the inspected room is sent before arrival
- #13 QR on the door: scan, report, then track the repair — AP
- #14 Day-one essentials kit: bucket, mug, mattress cover — SS
- #15 Room and room-mate details shared 3 days early — SR
- #16 Warden's first-night round with senior buddies — ST
- #17 Essentials map: water cooler, mess, medical, laundry — KM

Sticky colour = author: SD Sudhanshu · VS Vishwas · VR Vichanshu Raj · SS Saumya Sood · ST Satwik Santosh · KM Kyan Mahajan · AP Akshat Parmar · SR Sarthak Sharma | dashed attached note = "Yes, and..." build by a teammate

3.1 “Yes, and…” builds across the three boards

Each build kept the original idea and pushed it further. The builds were usually where the more novel ideas came from.

Board	Original idea	“Yes, and…” build	Cluster
PS-T	**SD**: Panic button on every seat row that alerts the driver and the nearest police van	**VS**: …and it also shares live GPS and a 10-second cabin clip	Feel Safe, Day & Night
PS-T	**SR**: Wheelchair users pre-book ramp and priority space via SMS	**SD**: …and the driver’s dashboard shows which stop needs the ramp	Ride for Everyone
PS-T	**ST**: Green-commute points redeemable at metro and canteen	**SR**: …and double points for off-peak travel, to spread the crowd	Make the Ride Worth It
PS-T	**KM**: Seat-availability lights outside each coach	**VR**: …and the same data feeds the crowd meter at stops	Make the Ride Worth It
PS-1	**VS**: Personalised checklist generated from category, state and quota	**SS**: …and each item expands to a photo of a correct sample	Know Exactly What to Bring
PS-1	**VR**: Autosave every field; resume from the exact failed step	**KM**: …and an offline mode queues uploads until the hotspot reconnects	Upload Once, Confidently
PS-1	**KM**: Official WhatsApp FAQ bot that uses only the latest advisory	**VS**: …and anything it cannot answer goes to a senior volunteer within 10 min	Help That Answers Fast
PS-2	**SR**: Token shows a personal route: Desk A, then B, then C, then Hostel	**VR**: …and it pings your phone when your desk is ready, so you can sit anywhere	Move Without Getting Lost
PS-2	**SS**: Live now-serving screens per desk	**AP**: …and show the average time per student so families can plan	Wait Less, Wait Better
PS-2	**VS**: Pre-handover inspection card signed by the caretaker	**SR**: …and a photo of the inspected room is sent before arrival	A Room Ready to Live In

3.2 What clustering revealed

Board	Clusters (named by user need)	Observation
PS-T	Feel Safe, Day & Night · Ride for Everyone · Make the Ride Worth It	Safety ideas were the most numerous; accessibility ideas were the most specific. Engagement ideas worked best when they also helped the system run better.
PS-1	Know Exactly What to Bring · Upload Once, Confidently · Help That Answers Fast	The checklist cluster and the upload cluster kept merging, which showed the checklist and the upload should be one object (later SCAMPER “Combine”).
PS-2	Move Without Getting Lost · Wait Less, Wait Better · A Room Ready to Live In	The token idea connected all three clusters, which made it the backbone of the PS-2 concept.

4. SCAMPER Matrix · PS-T

> **Existing feature: Bus stop-request button**
> A push-button on poles that sounds a bell and lights a "STOP" sign. It is hard to reach in a crowd, out of reach for some wheelchair users and children, and gives no confirmation to the person who pressed it.

	Innovative variation	User benefit (linked need)	Impact	Feasibility
S Substitute	Replace the push-button with a **capacitive touch strip along every handrail**, reachable from any seat or standing spot.	Accessibility and hygiene; nobody has to push through a crowd	★★★★☆	★★★★☆
C Combine	Merge stop request with **assistance and SOS**: short press to stop, long press for "need ramp or more time", triple press for a silent alert to the driver and control room.	Safety and accessibility from one familiar control	★★★★★	★★★☆☆
A Adapt	Borrow from the **aircraft cabin call bell and game-controller haptics**: the strip glows, vibrates to confirm, and shows the seat zone on the driver display.	The person pressing knows the request was received	★★★★☆	★★★★☆
M Modify / Magnify	Enlarge the feedback: a **large LED panel** reads "STOP REQUESTED · Next: Civil Lines · ramp needed", with an audio confirmation.	Visually and hearing-impaired passengers are both informed	★★★★☆	★★★★★
P Put to another use	Off-peak, the strip becomes a **one-press poll** ("Was this bus clean?"), feeding the operator dashboard.	Engagement; continuous service-quality data	★★★☆☆	★★★★☆
E Eliminate	Remove the button entirely: the **destination on the digital ticket or NCMC tap registers the stop automatically**.	No action needed from passengers; fewer missed stops	★★★★★	★★☆☆☆
R Reverse / Rearrange	Reverse who signals: the **bus tells the passenger**. The ticket or phone vibrates "your stop is next" one stop ahead.	Removes anxiety about missing the stop, especially for newcomers	★★★★★	★★★☆☆

4. SCAMPER Matrix · PS-1

> **Existing feature: Registration advisory PDF (document checklist)**
> A static PDF on the website listing documents for all categories. It has no version date and no samples, and it does not show which items the student has already completed. In A1, students reported documents asked for on campus that were not in this list.

	Innovative variation	User benefit (linked need)	Impact	Feasibility
S Substitute	Replace the static PDF with a **personalised interactive checklist** generated from the student's JoSAA category, state and quota.	Each student sees only their own items, which cuts confusion (US-01)	★★★★★	★★★☆☆
C Combine	Merge the checklist with the ERP upload: **each checklist line is its own upload slot with a status light** (grey, amber, green, red).	One place for "what" and "done"; addresses the missing accepted status (H2)	★★★★★	★★★☆☆
A Adapt	Borrow **airline web check-in**: when every item turns green, issue a "Ready to Report" boarding pass with QR and reporting slot.	Tangible proof before travel for student and parents (H1, H2)	★★★★★	★★★★☆
M Modify / Magnify	Magnify the examples: an **annotated sample for every document** showing where the stamp, signature and date must go.	Fewer rejected or wrongly notarised documents (US-02)	★★★★☆	★★★★★
P Put to another use	After admissions, the same checklist becomes the **official FAQ knowledge base** for senior volunteers and the WhatsApp bot.	One source of truth for every helper (US-19, H4)	★★★★☆	★★★★★
E Eliminate	Drop documents **already verified through JoSAA or DigiLocker**, and drop notarisation wherever institute policy accepts self-attestation.	Shorter list, less cost, fewer notary visits (US-04)	★★★★★	★★★☆☆
R Reverse / Rearrange	Reverse the burden: the institute **pre-fills what it already knows** ("we have 7 of 9; upload these 2") instead of the student discovering requirements.	The institute proves readiness to the student (HMW H06)	★★★★★	★★★☆☆

4. SCAMPER Matrix · PS-2

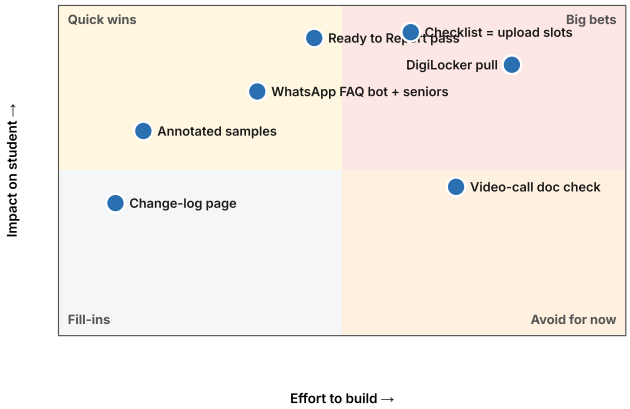

> **Existing feature: Paper token queue at the registration hall**
> A paper slip with a number, issued at the entrance. It does not show which desk comes next or how long the wait is. Tokens ran out for later arrivals, and families waited standing in the heat (A1: QUE ≈9, NAV ≈8).

	Innovative variation	User benefit (linked need)	Impact	Feasibility
S Substitute	Replace paper with a **QR e-token on SMS or WhatsApp**, tied to a pre-assigned reporting slot.	No running out of tokens; arrival is spread through the day (US-16)	★★★★☆	★★★★☆
C Combine	Merge the token with the **personal desk route and hostel room number**: one pass for the whole day.	Students always know the next step (US-13, H3)	★★★★★	★★★★☆
A Adapt	Borrow **theme-park virtual queues and hospital OPD displays**: families wait anywhere and are pinged when their desk is near.	Families can rest in shade instead of standing in line	★★★★★	★★★☆☆
M Modify / Magnify	Magnify visibility: **big now-serving screens per desk** with average time per student and the live total wait.	The wait becomes known and plannable (US-14)	★★★★☆	★★★★★
P Put to another use	Off-peak, token kiosks and screens become **hostel defect-ticket desks** and orientation schedule boards.	Reuses the hardware; supports room readiness (H5)	★★★☆☆	★★★★★
E Eliminate	Remove the queue for **pre-verified students**: a green express lane straight to ID photo and hostel.	Rewards pre-arrival work; shortens queues for everyone	★★★★★	★★★★☆
R Reverse / Rearrange	Rearrange the order: **hostel key and luggage drop first**, paperwork afterwards, or verifiers walk to seated families.	Families rest in the room while the student completes the desks	★★★★☆	★★★☆☆

5. Converging: Selecting Concepts

We placed the strongest ideas from the mind maps, boards and SCAMPER on an **impact versus effort** grid, then combined compatible ideas into one concept per problem statement. Ideas that can directly test an Assignment 2 hypothesis were ranked higher.

PS-1 candidates

PS-2 candidates

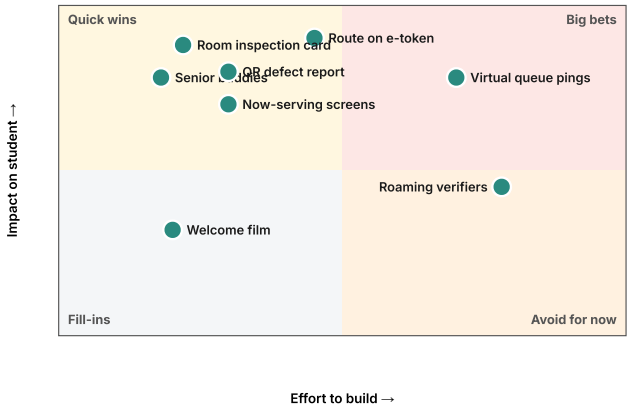

Figure. Impact versus effort plots. Positions are team estimates to be checked with admissions, ERP and hostel staff.

Criterion (weight)	ReadyPass (PS-1)	Gate-to-Room Pass (PS-2)	Smart Stop Strip (PS-T)
Addresses the POV's core insight (30%)	5: proof before travel	5: reassurance at every handoff	4: confirmation of request
Evidence from Empathize or brief (25%)	5: DOC, ERP	5: QUE, NAV, PEER, HOST	4: course brief
Feasible in one admission cycle (20%)	3	4	3
Tests a hypothesis (15%)	H1, H2	H3, H4, H5	n/a
Novelty (10%)	4	4	5
Weighted score / 5	**4.5**	**4.7**	**3.9**

5.1 Selected concepts

ReadyPass · PS-1 Certainty before travel

A personalised checklist built from the student's category, in which **every line is an upload slot with a status light**. Items already verified through JoSAA or DigiLocker turn green automatically. Each item shows an annotated sample and a notarisation tag. When all items are green, the student and parents receive a **"Ready to Report" pass** with a QR code and reporting slot. Any rule change triggers an alert and a change-log entry.

Built from: SCAMPER S, C, A, E, R · Board ideas 1, 4, 7, 10, 12 · Mind-map links "prevent rejections" and "auto-accepted items" · **Tests:** H1, H2

Gate-to-Room Pass · PS-2 From gate to a ready room

A slot-based e-token that shows the student's **personal desk route, live wait time and hostel room**. It pings families when their desk is near, so they can wait in shaded seating. Pre-verified students use a green lane. **Badged senior buddies** answer questions from the same official FAQ. Every room passes an **inspection card** before handover and carries a **scan-to-report QR** with visible repair status.

Built from: SCAMPER S, C, A, M, E · Board ideas 1, 5, 7, 12, 13 · Mind-map links "same token data" and "buddy escalates" · **Tests:** H3, H4, H5

Smart Stop Strip · PS-T Next-gen commuter experience

A **touch strip along handrails** with three modes: tap to stop, hold for assistance (ramp or more time), triple-tap for a silent SOS to the driver and control room. A large LED panel confirms each request, and the passenger's ticket vibrates **"your stop is next"** one stop ahead.

Built from: SCAMPER S, C, A, M, R · Board ideas 1, 7, 8

5.2 Next step: prototype and test

Concept	Low-fidelity prototype	Test with	Success signal (from A2 hypotheses)
ReadyPass	Clickable Figma flow: checklist, status lights, Ready pass	10 to 15 current first years plus 3 parents	85% or more identify all documents; 80% or more say they would feel ready to travel
Gate-to-Room Pass	Paper tokens with printed routes; role-play of 3 desks; room inspection card on 5 rooms	One section of juniors acting as arrivals, plus 2 wardens	Clarity rating 4 out of 5 or higher; 50% fewer "where next?" questions; 90% of rooms pass
Smart Stop Strip	Cardboard handrail with an LED strip; storyboard of the three modes	8 commuters, including 2 elderly and 1 wheelchair user	All participants trigger the correct mode on the first try

6. Generative AI Acknowledgement

As the brief requires, we declare our use of generative AI. AI was used as a **drafting and visualisation assistant**. The evidence base is our own Empathize research (30 student records), and the judgements and final decisions belong to the team.

Tool	Claude (Anthropic), Claude desktop app
When used	October 2026
Inputs provided	Our Assignment 1 Empathize report; the Assignment 2 and 3 briefs; the d.school “Developing a Point of View” handout; team member list
Prompt given (summary)	Complete the Assignment 2 (Define) and Assignment 3 (Ideation) deliverables for our IIITA registration project, using our Assignment 1 Empathize report as the only evidence base, to the highest quality.

How AI was used

Area	What the AI contributed	Grounded in
Mind maps	Proposed branch and node structure, icons, colour coding and concept links for all three problem statements	A2 problem statements and HMWs; course problem statement
Brainstorming boards	Generated candidate idea cards, “Yes, and…” builds and cluster labels; produced the digital board layout	A2 POVs and user stories
SCAMPER matrices	Applied all seven SCAMPER prompts to the chosen features; drafted benefit and feasibility notes	A3 SCAMPER definitions
Convergence	Drafted the impact versus effort ratings and concept summaries	Hypotheses H1 to H5 from A2

Human review

Review step	Responsible
Check every insight against the original response sheet	Sudhanshu, Vishwas
Remove or reword anything the evidence does not support	Vichanshu Raj, Saumya Sood
Confirm composite characters stay fictional and anonymised	Satwik Santosh
Edit wording into the team’s own voice	Kyan Mahajan, Akshat Parmar
Final consistency and formatting pass	Sarthak Sharma

Follow-up prompts for team iteration

These are prompts we designed for the next round of refinement. Each one checks the AI's output against evidence or users, instead of accepting it as it is.

Purpose	Prompt
Evidence audit	*Act as a design-research reviewer. For every insight, POV and problem statement in the attached report, cite the exact Empathize code (DOC, ERP, NET, QUE, NAV, PEER, STAFF, HOST, MESS, EMO, TIME, POS) that supports it. Flag any claim with no supporting evidence, and suggest a weaker, defensible rewording.*
Hypothesis stress test	*Here are five hypothesis statements written as "If we... for... then... because... which we will know is true when...". For each one, tell me whether it can be proven false, list the assumption most likely to break it, and propose the cheapest experiment our student team could run in one week to test that assumption.*
Persona challenge	*Role-play Ananya, a first year student from Patna travelling with her father on a fixed return ticket. React honestly to each idea on our brainstorming board: what would you actually use, what would you ignore, and what worries you? Stay in character and use only the context I give you.*
Bias and blind-spot check	*Review our user stories and journey maps for groups we may have left out: students with disabilities, students who travel alone, students without a smartphone, and students who do not speak Hindi or English. Suggest additional user stories for each, in the same format.*
SCAMPER deepening	*For the feature "paper token queue at the registration hall", generate three more variations for each SCAMPER letter. Rate each one 1 to 5 for student impact and for feasibility within one admission cycle, and explain the top-rated idea in two sentences.*
Prototype planning	*Turn our top three ideation concepts into low-fidelity prototype plans: what to build (paper, Figma or role-play), who to test with, the task script, and which hypothesis metric each test measures.*

> **Integrity notes**
>
> No new respondent data was invented. Theme counts are directional, as in A1. Named personas are fictional composites. All quotations come from the anonymised A1 excerpts or are clearly marked as persona thoughts.
